SUMMARY

Computer Science graduate with industry experience, shipped **full-stack** features through **SDLC**, **CI/CD**, and **automated testing**. Strong foundation in **full-stack web development**, and **DevOps** observability. Top **7% finalist** out of 9,100+ applicants at **Google Cloud Agentic AI Hackathon 2025**.

EDUCATION

B.M.S College of Engineering, Bengaluru	Karnataka, India
- <i>B.E in CSE (Data Science)</i> <i>CGPA: 8.62</i>	2022 – 2026
Delhi Public School, Bokaro	Jharkhand, India
- <i>Class XII (CBSE PCM)</i> <i>90.5%</i>	2020 – 2021

SKILLS

Languages: Java, C/C++, JavaScript, Python
Web Development: React.js, RESTful APIs, Node.js (Express.js), MySQL, PostgreSQL
DevOps & Cloud: Git, Docker, GCP, AWS Amplify, Prometheus, Grafana
ML Technologies: Computer Vision, OpenCV, MediaPipe

EXPERIENCE

Athenahealth	Bengaluru
<i>SDE Intern</i>	Jan 2026 – June 2026
- Published a React + TypeScript package to the internal athena registry and led its migration into 2+ down-stream apps with zero API/auth regressions, holding the consumer app's test coverage at 88% post-migration. - Designed a Node.js/Express admin flow (PostgreSQL-backed) letting partners reply to reviews via full CRUD (4 actions across 3 REST endpoints), cutting response TAT from 3 days to same-day. - Authored unit, integration, and E2E tests (Vitest, Playwright) at 89% branch coverage, running on Jenkins CI within a 1500+ test suite across CRUD/auth-failure scenarios. - Shipped 7+ features through full SDLC, picked up Jira stories, implemented features/fixes, raised PRs, cleared code review and QA before merging to production.	
Samsung R&D Institute	Bengaluru
<i>ML Intern</i>	Mar 2025 – Sept 2025
- Built a multimodal pipeline integrating FaceNet and Salesforce BLIP-2, achieving 90% accuracy in actor recognition and scene localization. - Developed an on-device VLM agent for contextual media retrieval, actor-based recommendations, multilingual discovery (2 languages), cutting content-search latency by 40% versus manual lookup.	

PROJECTS

Fi Compass

GitHub

Live Link

GCP, React, Firebase, Gemini Engine

– Architected and delivered **Fi Compass**, an AI financial partner that shifts personal finance from reactive tracking to proactive planning.

– Utilised a mock data server, a **React** frontend, a **Gemini**-powered backend and a **Firebase** NoSQL database on GCP.

– Built and deployed a conversational **Financial Guru** using **Google’s Vertex AI** with a custom knowledge base, hosted on **GCP** for instant in-app explanations of complex financial terms.

API Server

GitHub

Live Link

Node.js, Prometheus, Grafana, Postman

– Engineered a **Node.js** API server with a full observability stack, instrumenting **5+** key performance metrics.

– Instrumented **10+** metrics via **Prometheus** across **5+** **API endpoints**, improving stability visibility by **50%**.

– Built **6+** **Grafana** dashboards with **Alertmanager** alerts flagging error-rate spikes and resource anomalies, cutting issue-identification time by **20%**.

Explore Bharat

GitHub

Live Link

Express.js, REST APIs, MySQL

– Created an end-to-end full-stack travel platform, designing a responsive user interface and a scalable server-side architecture with **Express.js**.

– Designed a relational data model in **MySQL** and secured **RESTful APIs** using **Express.js**, ensuring reliable communication between the frontend and backend. Optimized server-side logic, reducing average page load time by **20%**.
